

MORE EXPRESSION

Introducing the **ControllerHub 8**

While using both hands to play your instrument through audio hardware or software, you need a hands-free way to manipulate parameter settings for maximum expression. Yet existing “all-in-one” pedalboard products force you to use a set combination of low-quality pedals and buttons in a fixed layout.

ControllerHub 8 from **Amelia's Compass**

ControllerHub 8 is the central hub for a modular foot control setup. Connect any combination of up to eight of your favorite expression pedals and footswitches, or expand to multiple ControllerHub 8's if you need even more. You have complete freedom in the placement of all your controllers on your board or even around the room. ControllerHub 8 converts your pedal movements and button presses into MIDI message streams over USB and MIDI cables. With a programmable MIDI patch bay and merger, it provides customized routing between controller inputs, MIDI and USB. The input jacks even switch-hits between pedals and buttons!
